

# CRAY CX1

## We take supercomputing personally.

For organizations wanting to harness HPC without the complexity of traditional clusters, the Cray CX1™ high productivity supercomputer delivers the power of a high performance cluster with the ease-of-use and seamless integration of a workstation. The CX1, equipped with powerful Intel® Xeon® processors and Windows HPC Server 2008, offers performance leadership across a broad range of applications and standard benchmarks.

The CX1 also offers Linux and virtualized environments to support the broadest library of applications possible.

Affordably priced, the CX1 is the "right size" in performance, functionality and cost for a wide range of users, from individuals and workgroups, up to the department level. The Cray CX1 system is designed to be simple to configure, deploy, administer and, most importantly, use.

To find out how the Cray CX1 supercomputer can help you achieve maximum results, visit [www.cray.com](http://www.cray.com) or email [cx1info@cray.com](mailto:cx1info@cray.com).
